

The Retap Bottles are especially designed for drinking tap water. We want to transform the way we drink water by providing the best hydration experience possible.

The simple and functionalistic scandinavian design guarantees a great water flow. We chose to make the bottles from borosilicate glass: an extra strong kind of glass that is unlikely to break. Glass cannot contaminate your water, so it's safe for your personal health. Retap Bottles are easy to clean in the dishwasher to assure that you're water stays clean and is safe to drink.

The Retap Bottles are our sustainable alternative for bottled water.

Rethink water.
