

The Retap Lids are designed and made in Denmark. The material is a thermoplastic elastomer (TPE). We carefully selected this material and fine-tuned the look and feel to the smallest details.

An essential feature is that the lid is suitable for reuse. You can simply wash the lids in a dishwasher and they are free of phtalate and BPA, so the lid will not affect the fresh tap water in a Retap Bottle.

The most attractive feature is the wide range of different colours. A great way to personalize your bottle.

Colour your life.

No edges needed: bacteria-free

Material: thermoplastic elastomer

Size: 33 mm (height)
40 mm (diameter max.)

Weight: 30 gr

- Fits all sizes of Retap Bottles
- Available in a broad range of attractive colours
